

## New challenge for Stefan at KMF

After four years managing the development of operations at KMF's Advanced Solutions division ([www.kmf.co.uk](http://www.kmf.co.uk)), Stefan Rduch is taking on a new challenge in business development at Newcastle under Lyme-based KMF (Precision Sheet Metal). In his new role, he will focus on developing sales in the aerospace sector, which is seen as a significant market for KMF's expertise in sheet metal manufacture and electronic integration.

Mr Rduch says: "It was a fantastic privilege to be given the job of managing KMF Advanced Solutions. The chance to take it from an empty factory to a business unit that is generating a turnover in excess of £4 million has been an experience that will remain with me for many years to come.

"At KMF, we are well placed to work in partnership with leading aerospace manufacturing companies to provide them with a totally outsourced sheet-metal fabrication and integration service — something that we already do for several customers. My new role will be to develop these new partnerships and ensure that KMF is first choice when these businesses are looking to expand their manufacturing capacity."

After completing an apprenticeship at KMF, Mr Rduch went on to complete further training, gaining an HNC and HND in Mechanical Engineering, along with level five of the Chartered Institute of Purchasing and Supply's qualification.
