

New quality role created at KMF

KMF (Precision Sheet Metal)'s commitment to developing its staff to fulfil new and challenging roles has seen the appointment of Gary Sutton as the company's UK Quality Manager. With 15 years' experience of working within KMF, most recently as a 'continuous improvement' engineer, Mr Sutton is well versed in the company, its customers and procedures.

In his previous role, he was tasked with driving the improvement culture within KMF, which included a six-month secondment to assist in setting up the quality system for the company's manufacturing facility in Slovakia. This involved writing the quality management system and ensuring accreditation to ISO9001.

Upon completion of this project, Mr Sutton moved across to the quality department as a quality engineer, before taking up his current role as UK quality manager. His new position will involve him working across all of KMF's manufacturing facilities.
