
KMF packing a punch

Staffordshire, UK-headquartered KMF (Precision Sheet Metal) has expanded the capacity of its facility in Trenčianske Stankovce, Slovakia with the addition of a Trumpf Trupunch 3000 punching machine. The machine, with its 1000 hits/minute punch rate, will be used to enhance the service already provided to customers across

mainland Europe, particularly those that have the need to outsource larger volume production. "The new machine will also enhance the offering we can make to customers due to its tapping and forming capability," says Radim Vaculin, the facility's business manager.
