

KMF go live with Epicor

In addition to major investment in manufacturing technology, KMF Precision Sheet Metal has just completed the implementation of a new ERP system following an in-depth process of selection and justification.

The new Epicor 9 system has recently gone live following a structured evaluation process to select the best fit solution for the Newcastle-under-Lyme subcontractor of sheet metal components. The process involved the evaluation of ERP systems

from five different vendors, with Epicor being selected due to its experience in the make-to-order market and its inbuilt flexibility which allows KMF to

utilise the system features with customisation.
