

Trumpf sponsor next generation

As part of the successful Young Engineer of the Year event created by Newcastle-under-Lyme-based KMF (Precision Sheet Metal), Trumpf is sponsoring one of the local Staffordshire schools competing in the 2013/14 challenge. Trumpf is pairing up with Haywood Academy, a secondary school with academy status for 11 to 16 year-olds which is located in Burslem area of Stoke-on-Trent. Together, the team will design and build a Greenpower racing car.

"Our first KMF event was a fantastic success and has inspired us to expand it and increase the level of technical challenge involved," says Gareth Higgins, managing director at KMF. "We now have 18 schools taking

part and, without the support of sponsors such as Trumpf, this would not be happening on such a scale. The sponsors are not just contributing financially, but

are mentoring the students by providing support and technical advice as and when required."
