

Pic of the month: Young engineers have been revving up for a career in frontline manufacturing and engineering with two national competitions to design, build and race their own cars.

Eighteen schools went head to head on the tarmac of Darley Moor race circuit at the finals of the KMF Young Engineer of the Year Awards. Team Eagle [pictured] from St Joseph's Catholic College picked up the endurance award with their electric powered car travelling 31.2 miles over the 90 minutes.

Electric power also took the chequered flag at Formula Student in Silverstone last month. The Dutch team from Delft University of Technology triumphed in the competition.
